The 6" Fountain Modules

Here lies a treasure. These modules will direct water and can be used to create fountains of any size. The possibilities of creating different designs are infinite and amazing. We have not seen any other tiles on the market that are designed to direct water within a mural of varying sizes and designs.

The fountain can be large or small, horizontal, vertical or angled, it can be plumbed permanently or can use a recirculating pump. It can even be portable. All you need is a location with electricity and some form of basin to hold water.

Use the Cascades (two sizes of leaves and the waterfall) to make water walls. The hole to insert the pipe or hose can be placed in most any tile and can be covered with many of our appliqué. We alter the appliqué when the clay is wet to allow the water to run underneath it. You can place them to your preference on-site.

The Leaf Trickles come in double leaves, and single leaves facing either direction. The 12" Banana Leaf Trickle comes on a bark or stone textured background. Both right and left facing leaves are offered.

Imagine a two-foot by three-foot space with a lovely smaller fountain gracing the entrance in a private home. The same tiles work and what range this gives you to be truly creative.

Ready to take the next step? There is more information in our Fountain and Mural Section where we have outlined all the steps necessary to have your very own wall of water.
