The 6" Fountain Modules

Here lies a treasure. These modules will direct water and can be used to create fountains of any size. The possibilities of creating different designs are infinite.

The fountain can be large or small, horizontal, vertical, or angled. It can even be portable. All you need is a location with electricity and some form of basin to hold water.

Use the Cascades (two sizes of leaves and the waterfall) to make water walls. The hole to insert the pipe or hose can be placed in most any tile and can be covered with many of our appliquéés. We alter the appliqué when the clay is wet to allow the water to run underneath it. You can place them to your preference on-site.

The Leaf Trickles are three dimensional. The extended half of the leaf is added by hand. They are designed to direct the flow of water and can be used in multiples. They are also used only for their unusual dimension where no water is used.
